for a long time i have had the gnawing desire to convey the broad motivational significance of the attributional conception that i have espoused and to present fully the argument that this framework has earned a rightful place alongside other leading theories of motivation furthermore recent investigations have yielded insights into the attributional determinants of affect thus providing the impetus to embark upon a detailed discussion of emotion and to elucidate the relation between emotion and motivation from an attributional perspective the presentation of a unified theory of motivation and emotion is the goal of this book my more specific aims in the chapters to follow are to 1 outline the basic principles that i believe characterize an adequate theory of motivation 2 convey what i perceive to be the conceptual contributions of the perspective advocated by my colleagues and me 3

grand theories in psychology you might think have been out of fashion for quite some time however since its inception in the early 1980s reversal theory has attracted a great deal of professional attention and scholarly interest has seen rapid growth in recent years in this seminal work michael j apter puts forward a new framework for understanding the structure of mental experience rejecting many widely accepted psychological assumptions behaviour he says can only be understood by reference to the subjective meaning assigned to it by the actor cognition as the sole focus of psychological analysis is erroneous motivation and emotion must be reinstated as equally central concerns and understood on their own terms furthermore he argues personality is not a conglomeration of static traits but rather a dynamic interactive matrix of change demystifying behaviour cognition emotion motivation and what it is to be a person reversal theory is a revolutionary take on the psyche of man including chapters on past research and where the future is headed this book represents its most concise and complete statement to date

psychological theory has traditionally attempted to explain events in terms of motivation emotion or cognition over the past decade psychology has come to be viewed as a paradigmatic science the new paradigm being the understanding of behavior in terms of cognitive representations this cognitive revolution has fostered a view of the passing of information back and forth between perceptual memory and motor components of an integrated system known as the computational metaphor with cognition as the new paradigm can we expect that the explanatory scope of psychology will be clarified will a cognitive perspective be extended to phenomena that have traditionally fallen under the rubric of motivation and emotion the psychologists involved in this volume of the nebraska symposium address these questions specifically their contributions stimulate a hypothesis that the cognitive paradigm has begun to move psychology toward a unified field theory of behavior and experience herbert a simon tests the limits of a pure information processing paradigm a basic tenet of this theoretical approach is that information exists independent of the medium by which it is represented by analyzing the information processing capabilities of nonbiological systems or artificial intelligence we may determine which aspects of motivation and emotion require the biological substrate

of cognition muriel d lezak raises a similar question by focusing on the biological substrate itself and by analyzing the constraints and determinations that it imposes howard gardner considers the medium and the information it processes thus he lays a conceptual foundation for making the facts of biological brain science congruent with the richness of human behavior and experience

leadership is motivation and motivation is leadership say the authors of this important and unique study the two elements are inseparable but until now no one has actually conceptualized motivation in a useful way to demonstrate and analyze the connection between it and leadership the key for leaders is dealing with the emotions that underlie and activate motivation maddock and fulton provide a highly successful proven and replicable approach not only to motivate people but also to train them to lead others the authors develop an 11 level structure of human motivation that defines and describes motivation in simple graphic all inclusive language they then show how leaders can use this motivational hierarchy to solve complex problems in the workplace the result is a blueprint to help executives in all types of organizations manage more effectively and as they do so to motivate and truly lead the people who depend on them for guidance and direction maddock and fulton offer several scenarios to show how their ideas work in practice in the vertical fix they demonstrate how motives that get out of synch with each other can be re aligned eliminating the chaos that would otherwise occur in the lateral fix they show how a person who may be functioning at the extreme edge of motivation can be moved back toward the center a place where the person s effect on others is most and best felt well documented throughout their book will be important reading for training and development professionals specialists in organizational behavior and executives at all levels in public and private sectors
