this book contributes to a better understanding of the relationship between migration vulnerability resilience and social justice associated with flooding across diverse environmental social and policy contexts in southeast asia it challenges simple analyses of flooding as a singular driver of migration and instead considers the ways in which floods figure in migration based livelihoods and amongst already mobile populations the book develops a conceptual framework based on a mobile political ecology in which particular attention is paid to the multidimensionality temporalities and geographies of vulnerability rather than simply emphasising the capacities or lack thereof of individuals and households the focus is on identifying factors that instigate manage and perpetuate vulnerable populations and places these include the sociopolitical dynamics of floods flood hazards and risky environments migration and migrant based livelihoods and the policy environments through which all of these take shape the book is organised around a series of eight empirical urban and rural case studies from countries in southeast asia where lives are marked by mobility and by floods associated with the region s monsoonal climate the concluding chapter synthesises the insights of the case studies and suggests future policy directions together the chapters highlight critical policy questions around the governance of migration institutionalised disaster response strategies and broader development agendas

since the first days of the new presidency the obama administration has continued to seek a definition of the us relationship to the united nations from the time of president s first appearances at the general assembly and the security council his watchwords have been engagement and multilateralism but americans and non americans allies and enemies have wondered from the beginning just what those terms mean as actual policy of the united states of america in living with the un kenneth anderson attempts to set out the meanings of multilateralism and engagement with the united nations in a fashion that can actually guide policy anderson explains that there are many united nations for it is a collection of different institutions organs actors functions motives and motivations once the multiplicity of the united nations is on the table he shows it becomes possible to see that there are multiple ways of engaging or not with it or with them he then provides approximate rules of thumb that can guide us policy as the presumptive starting point for how or how not to engage with the united nations in its particular parts and functions anderson argues convincingly that the goal of the united states cannot be simply to make the united nations more efficient and effective however much one might wish it he shows that a more responsive better run and generally more effective united nations would not always operate in america s interest rather a genuinely effective united nations would almost certainly be in important matters more effectively anti american to both its policies and its ideals thus the author s ultimate answer to the

ancestor veneration in the maya lowlands traditionally has been associated with divine kingship and royal genealogies but in this revisionist study patricia mcAnany challenges this view and presents a strong case for the formative period roots of ancestor veneration suggesting that it is an ancient agrarian practice linked to the emergence or restrictive patterns of land tenure and unequal access to resources just as the decipherment of hieroglyphs has given voice to the political strategies of classic maya elites so living with the ancestors gives voice to the agrarian strategies and political struggles of non elite maya a first approach to a complete history of the maya it will be important reading for everyone interested in mesoamerican culture
