Dogs 2001-05-27 two canine ethnologists probe the nature versus nurture debate in the social order of dogs tracing the origins of canine intelligence

Dogs 2002-10 offering a scientifically informed perspective on canines and their relations with humans two biologists take a close look at eight different types of dogs household village livestock guarding herding sled pulling pointing retrieving and hound 34 halftones

Dogs 2008-11-03 biologists breeders and trainers and champion sled dog racers raymond and lorna coppinger have more than four decades of experience with literally thousands of dogs offering a scientifically informed perspective on canines and their relations with humans the coppingers take a close look at eight different types of dogshousehold village livestock guarding herding sled pulling pointing retrieving and hound they argue that dogs did not evolve directly from wolves nor were they trained by early humans instead they domesticated themselves to exploit a new ecological niche mesolithic village dumps tracing the evolution of today s breeds from these village dogs the coppingers show how characteristic shapes and behaviorsfrom pointing and baying to the sleek shapes of running dogsarise from both genetic heritage and the environments in which pups are raised for both dogs and humans to get the most out of each other we need to understand and adapt to the biological needs and dispositions of our canine companions just as they have to ours

What Is a Dog? 2016-04-27 exploring the natural history of these creatures the coppingers explain how the village dogs of vietnam india africa and mexico are strikingly similar these feral dogs argue the coppingers are in fact the real representative dogs nearly uniform in size and shape and incredibly self sufficient drawing on nearly five decades of research they show how dogs actually domesticated themselves in order to become such sufficient scavengers of human refuse the coppingers also examine the behavioral characteristics that enable dogs to live successfully and to reproduce unconstrained by humans in environments that we ordinarily do not think of as dog friendly from publisher description

Canine Behavior 2009-01-01 bonnie v beaver provides a clear understanding of normal dog behaviors and the necessary tools to identify problem behaviors and their origins canine behavior shows how to prevent eradicate or minimize unacceptable behaviors and build successful lifelong relationships with one s dogs

How Dogs Work 2015-10-22 two experts drawing on decades of research and field experiments unlock the origins of many of our dogs most common most puzzling and most endearing behaviors and explore such canine mysteries as why dogs play why they bark how they feed and forage why they guard and herd and much more

Dog Sense 2012-05-08 dogs have been mankind s faithful companions for tens of thousands of years yet today they are regularly treated as either pack following wolves or furry humans the truth is dogs are neither and our misunderstanding has put them in serious crisis what dogs really need is a spokesperson someone who will assert their specific needs renowned anthrozoologist dr john bradshaw has made a career of studying human animal interactions and in dog sense he uses the latest scientific research to show how humans can live in harmony with not just dominion over their four legged friends from explaining why positive reinforcement is a more effective and less damaging way to control dogs behavior than punishment to demonstrating the importance of weighing a dog s unique personality against stereotypes about its breed bradshaw offers extraordinary insight into the question of how we really ought to treat our dogs

Dog Behavior 2018-11-29 dog behavior modern science and our canine companions provides readers with a better understanding of canine science including evolutionary concepts ethograms brain structures and development sensory perspectives the science of emotions social structure and the natural history of the species the book also analyzes relationships between humans and dogs and how the latter has evolved readers will find this to be an ideal resource for researchers and students in animal behavior specifically focusing on dog behavior and human canine relationships in addition veterinarians seeking further information on dog behavior and the social temperament of these companion animals will find this book to be informative provides an accessible engaging introduction to animal behavior specifically related to human canine relationships clarifies misunderstandings mysteries and misconceptions about canines with historical evidence and scientific studies offers insights and techniques to improve human canine relationships

Dog Behaviour, Evolution, and Cognition 2009 the first book to summarize the burgeoning research literature on the behavioural ecology of the dog it presents a new ecological approach to the understanding of dog behaviour and highlights directions for future research providing links to human and primate behaviour research it will appeal to anyone interested in behavioural ecology

Meet Your Dog 2018-04-17 based on the latest findings in the field of canine cognition and behavior this book is an invaluable resource hal herzog author of some we love some we hate some we eat why it s so hard to think straight about animals every dog owner knows that along with the joy can come the stress and frustration of behavioral problems which are expensive to diagnose and treat enter kim brophey award winning canine behavior consultant using cutting edge research brophey has

developed a groundbreaking system that allows owners to identify what their dog is struggling with why and how they can fix it brophesy s approach is unlike anything that has been published before and will give dog owners a new understanding of what motivates and affects their dog s behavior this innovative technique rethinks the way we categorize dogs and distills information from over twenty scientific disciplines into four comprehensive elements learning environment genetics and self with revolutionary tips for specific dog breeds this book will change dog owners lives and lead to happier human canine relationships it s refreshing to finally find a book that takes into consideration the many predispositions to behavior problems in dogs teaches us to really see the dog in its entirety alexandre rossi author of a dog at the keyboard

The Social Dog 2014-05-20 dogs have become the subject of increasing scientific study over the past two decades chiefly due to their development of specialized social skills seemingly a result of selection pressures during domestication to help them adapt to the human environment the social dog behaviour and cognition includes chapters from leading researchers in the fields of social cognition and behavior vocalization evolution and more focusing on topics including dog dog and dog human interaction bonding with humans social behavior and learning and more dogs are being studied in comparative cognitive sciences as well as genetics ethology and many more areas as the number of published studies increases this book aims to give the reader an overview of the state of the art on dog research with an emphasis on social behavior and socio cognitive skills it represents a valuable resource for students veterinarians dog specialists or anyone who wants deeper knowledge of his or her canine companion reviews the state of the art of research on dog social interactions and cognition includes topics on dog dog as well as dog human interactions features contributions from leading experts in the field which examine current studies while highlighting the potential for future research

The Behavioural Biology of Dogs 2007 written by experts in different areas this book presents an up to date account of the behavioral biology of dogs split in three parts the book addresses the specific aspects of behavioral biology the first part deals with the evolution and development of the dog whereas the next part deals with basic aspects of dog behavior the final part emphasizes on the behavioral problems their prevention and cure

The Long and the Short of It 2013-11-01 everything that lives will die that s the fundamental fact of life but not everyone dies at the same age people vary wildly in their patterns of aging and their life spans and that variation is nothing compared to what s found in other animal and plant species a giant fungus found in michigan has been alive since the ice age while a dragonfly lives but four months a mayfly half an hour what accounts for these variations and what can we learn from them that might help us understand or better manage our own aging with the long and the short of it biologist and writer jonathan silvertown offers readers a witty and fascinating tour through the scientific study of longevity and aging dividing his daunting subject by theme death life span aging heredity evolution and more silvertown draws on the latest scientific developments to paint a picture of what we know about how life span senescence and death vary within and across species at every turn he addresses fascinating questions that have far reaching implications what causes aging and what determines the length of an individual life what

changes have caused the average human life span to increase so dramatically fifteen minutes per hour in the past two centuries if evolution favors those who leave the most descendants why haven't we evolved to be immortal the answers to these puzzles and more emerge from close examination of the whole natural history of life span and aging from fruit flies nematodes redwoods and much more the long and the short of it pairs a perpetually fascinating topic with a wholly engaging writer and the result is a supremely accessible book that will reward curious readers of all ages

The Domestic Dog 1995 a scientific analysis of dogs their behaviour and their relationships with humans

The Dog 2018-03-01 this hardback almanac is the perfect edition addition to any dog lover's library and a useful tool for anyone considering acquiring a four legged friend for their household countryside magazine national farmers union provides a good read for those wanting a better understanding of their canine companion for those working with dogs in any capacity the book is a must read the association of pet behaviour counsellors divided in sections and beautifully illustrated with photographs the dog a natural history is a fascinating comprehensive exploration of everything we know about dogs so far in terms of biology evolution behaviour and their role in our lives and culture dogs monthly there are plenty of books out there about living with and training a dog the dog a natural history is something much wider ranging an in depth look at every aspect of the species from prehistoric origins to its biology its behaviour and its relationship with humankind an initial chapter on evolution development looks at dogs ancestors chapters on anatomy biology society behaviour and dogs humans follow accessing the most recent studies on everything canine from hunting patterns to diversity and training methods to classification you'll find everything you ever wanted to know in this comprehensive study to finish a canine directory offers extended profiles and portraits of a range of the most popular breeds from first to last it's a book that will prove irresistible to anyone curious about how the dog gained his prime position in the human world

Handbook of Applied Dog Behavior and Training, Adaptation and Learning 2013-04-29 twenty five years of study and experience went into the making of this one of a kind reference veterinarians animal scientists dogowners trainers consultants and counsellors will find this book a benchmark reference and handbook concerning positive human management and control of dogs reflecting the author's extensive work with dogs this book promises thorough explanations of topics and proven behavioural strategies that have been designed tested and used by the author more than 50 figures and tables illustrate this unique and significant contribution to dog behaviour training and learning

The First Domestication 2017-11-28 a riveting look at how dog and humans became best friends and the first history of dog domestication to include insights from indigenous peoples in this fascinating book raymond pierotti and brandy fogg change the narrative about how wolves became dogs and in turn humanity's best friend rather than describe how people mastered and tamed an aggressive dangerous species the authors describe coevolution and mutualism wolves particularly ones shunned by their packs most likely initiated the relationship with paleolithic humans forming bonds built on mutually recognized skills and emotional capacity this interdisciplinary study draws on sources from evolutionary biology as well as tribal and indigenous histories to produce an intelligent insightful and often unexpected story of cooperative hunting wolves protecting camps and wolf human companionship this fascinating assessment is a must read for anyone interested in human evolution ecology animal behavior anthropology and the history of canine domestication

Why Dogs Do That 2012-07-03 why do dogs bury bones why do dogs turn circles before lying down why do dogs chase cars or their tails these and 36 other curious canine behaviors are informatively and lightheartedly answered in the handsomely illustrated why dogs do that an original pencil drawing rich in detail illustrates each insightful explanation of odd but characteristic dog actions social graces and sometimes unseemly deportment

The Domestic Dog 2017 second edition of a classic text on canine science and behavior incorporating two decades of new evidence and discoveries

In Defence of Dogs 2011-07-11 a dog is not for christmas this is john bradshaw one of the world's leading dog experts brings us a compelling insight into what dogs would ask us for if only they knew how the dog has been mankind's faithful companion for tens of thousands of years yet today finds itself in crisis throughout the western world until just over a hundred years ago most dogs worked for their living and each of the many breeds had become well suited over countless generations to the task for which they were bred now in their purely domestic roles we fail to understand their needs and it is time that someone stood up for dogdom not the caricature of the wolf in a dog suit ready to dominate its unsuspecting owner at the first sign of weakness not the trophy animal that collects rosettes and kudos for its breeder but the real dog the pet that just wants to be one of the family and enjoy life biologists now know far more about what really makes dogs tick than they did twenty years ago but this new understanding has been slow to percolate through to owners and has not yet made enough of a difference to the lives of the dogs

themselves this book is here to set the record straight

The Genius of Dogs 2013-02-05 the perfect gift for dog lovers and readers of inside of a dog by alexandra horowitz this new york times bestseller offers mesmerizing insights into the thoughts and lives of our smartest and most beloved pets does your dog feel guilt is she pretending she can t hear you does she want affection or just your sandwich in their new york times bestselling book th e genius of dogs husband and wife team brian hare and vanessa woods lay out landmark discoveries from the duke canine cognition center and other research facilities around the world to reveal how your dog thinks and how we humans can have even deeper relationships with our best four legged friends breakthroughs in cognitive science have proven dogs have a kind of genius for getting along with people that is unique in the animal kingdom this dog genius revolution is transforming how we live and work with dogs of all breeds and what it means for you in your daily life with your canine friend

How Dogs Learn 1999-05-04 this book should be on every animal trainer s bookshelf for future reference how dogs learn covers the content of an undergraduate course in learning and behavior but the examples are taken from dog training it is practical and very useful without sacrificing scientific and technical accuracy jack michael phd department of psychology western michigan university how dogs learn explore the fascinating science of operant conditioning where science and dog training meet how dogs learn explains the basic principles of behavior and how they can be used to teach your dog new skills diagnose problems and eliminate unwanted behaviors it s for anyone who wants to better understand the learning process in dogs every concept is laid out clearly and precisely and its relevance to your dog and how you train is explained a howell dog book of distinction

The Original Dog Bible 2009 contains everything a dog owner would want or need to know about dogs their care health and history the second edition has over 50 pages of new and updated information with new photos tips and advice

Demystifying Dog Behaviour for the Veterinarian 2021-04-18 the behaviour textbook that s been missing dr mandy roshier university of nottingham school of veterinary medicine and science uk this practical guide for busy veterinarians demystifies the apparently complex nature of canine behaviour while simultaneously emphasising its importance authored by acclaimed veterinary behaviour consultant kendal shepherd the book provides practical knowledge of dog behaviour and an understanding of how to talk about it with clients shepherd shows how this can enhance the relationship between owner and pet and between dog and environment including the vet surgery as well as improve the vet s own sense of fulfilment and enjoyment of practice from a discussion on the true nature of obedience to stressing the importance of behavioural indicators when assessing pain and mental welfare and finally by reminding vets of their obligations under dangerous dogs legislation the emphasis is on the prevention of aggression throughout packed with anecdotes drawn from real life cases easy to read and understand the principles explained can be effortlessly assimilated into the average consultation without the need for lengthy report writing

Think Dog 2012-06-06 in this seminal pet psychology book john fisher examines the mind of the dog with examples taken from his practical experience with the aim of explaining to owners how the world appears from a dog s point of view the first section of the book traces the ancestry and inherent behaviour of dogs from their origins as pack animals related to the wolf or the jackal the second part examines what most people describe as problem behaviour which is just normal canine behaviour exhibited in the wrong place the book concludes with an a z of common problems their causes and cures in the 1980s and 1990s john fisher revolutionised dog training first in england then in the us with his self deprecating manner and oh so british sense of humour he taught us to think dog

The Other End of the Leash 2009-02-19 learn to communicate with your dog using their language good reading for dog lovers and an immensely useful manual for dog owners the washington post an applied animal behaviorist and dog trainer with more than twenty years experience dr patricia mcconnell reveals a revolutionary new perspective on our relationship with dogs sharing insights on how man s best friend might interpret our behavior as well as essential advice on how to interact with our four legged friends in ways that bring out the best in them after all humans and dogs are two entirely different species each shaped by its individual evolutionary heritage quite simply humans are primates and dogs are canids as are wolves coyotes and foxes since we each speak a different native tongue a lot gets lost in the translation this marvelous guide demonstrates how even the slightest changes in our voices and in the ways we stand can help dogs understand what we want inside you will discover how you can get your dog to come when called by acting less like a primate and more like a dog why the advice to get dominance over your dog can cause problems why rough and tumble primate play can lead to trouble and how to play with your dog in ways that are fun and keep him out of mischief how dogs and humans share personality types and why most dogs want to live with benevolent leaders rather than alpha wanna bes fascinating insightful and

2014-09-29

compelling the other end of the leash is a book that strives to help you connect with your dog in a completely new way so as to enrich that most rewarding of relationships

The Story of Your Dog 2022-04-05 get to know your dog renowned expert dog trainer and bestselling author of lucky dog lessons brandon mcmillan unpacks the unique and often misunderstood 15 000 year evolutionary history governing a dog s every move most dog owners know the truth their dogs are totally incompatible with the modern world instincts like herding chasing and protecting have no natural outlet and frequently result in chewing barking nipping jumping lunging and worse however as mcmillan argues in these pages the solution isn t as simple as mastering sit and stay no matter what kind of dog you have no matter how old or young or well trained or well bred your beloved companion is strongly influenced by his dna the result of these genetic distinctions shows up in every inch and action from the size and shape of a dog s head and the brain inside it to the length and curve of his tail from the texture of her fur to the webbing or lack of webbing between her toes it s in their lung capacity their tolerance for heat and cold their appetites for food and exercise and whether and how they bark it goes beyond their structure and deep into their psychological profiles perhaps you re lucky enough to have a dog with more than a few breeds mixed in which makes this information all the more crucial to know and understand in the story of your dog mcmillan breaks down why your dog acts the way it does so you can train better and easier with fewer missteps and miscommunications and bond in ways you never thought possible it is an invitation to get to know the sometimes frustrating but always incredible dog at the other end of the leash

Dawn of the Dog 2016-08-17 in dawn of the dog biologist janice koler matznick explains why it is unlikely the gray wolf is the dog s ancestor the dog was a unique species closely related to wolves before it attached itself to man the science supporting this idea is explained in everyday language the natural dogs the dingoes and aboriginal village dogs are showcased

What's a Dog For? 2012-11-08 john homans adopted his dog stella from a shelter for all the usual reasons fond memories of dogs from his past a companion for his son an excuse for long walks around the neighborhood soon enough she is happily ensconced in the daily workings of his family and not only that stella is treated like a family member in ways that dogs of his youth were not spending humanlike sums on vet bills questioning her diet and exercise regimens contemplating her happiness how had this all come to pass when the dogs from homans s childhood seemed quite content living mostly out in the yard in what s a dog for homans explores the dog s complex and prominent place in our world and how it came to be evolving from wild animals to working animals to nearly human members of our social fabric dogs are now the subject of serious scientific studies concerning pet ownership evolutionary theory and even cognitive science from new insights into what makes dogs so appealing to humans to the health benefits associated with owning a dog homans investigates why the human canine relationship has evolved so rapidly how dogs moved into our families our homes and sometimes even our beds in the span of a generation becoming a 53 billion industry in the united states in the process as dogs take their place as coddled family members and their numbers balloon to more than seventy seven million in the united states alone it s no surprise that canine culture at large is also undergoing a massive transformation they are now subject to many of the same questions of rights and ethics as people and the politics of dogs are more tumultuous and public than ever with fierce moral battles raging over kill shelters puppy mills and breed standards incorporating interviews and research from scientists activists breeders and trainers what s a dog for investigates how dogs have reached this exalted status and why they hold such fascination for us with one paw in the animal world and one paw in the human world it turns out they have much to teach us about love death and morality and ultimately in their closeness and difference about what it means to be human

How Dogs Love Us 2013 a neuroscientist recounts his efforts to overcome administrative and behavioral hurdles to train his dogs to sit still during an mri scan an effort that produced evidence about canine empathy and the human dog bond

Between Dog and Wolf 2012 includes bibliographical references p 163 175 and index

The Truth About Dogs 2016-01-28 stephen budiansky holds that virtually everything previously written about dogs is either wrong or misguided instead he maintains that to understand the true nature of dogs we need to stop interpreting their behaviour in the human terms of loyalty and betrayal the truth is far more complex and surprising the dog genome project is currently laying the groundwork for identifying the genetic basis of why our dogs behave in the way they do other research investigates canine intelligence and some remarkable experiments reveal what dogs can and cannot see budiansky brings together the disciplines of behavioural science genetics neuroscience and archaeology to show us how wrong we have been about man s best friend

Dog Behaviour, Evolution, and Cognition 2015 a comprehensive update to the first monograph on dog behaviour evolution and cognition

Excel-erated Learning 1996 excel erated learning explaining in clear english how dogs learn and how best to teach them reveals the secret for increasing the speed and efficiency of dog training with the freedom of understanding how your dog learns comes the ability of making the process easy efficient and enjoyable for your dog

The truth about wolves and dogs 2012 as an unabashed dog lover alexandra horowitz is naturally curious about what her dog thinks and what she knows as a cognitive scientist she is intent on understanding the minds of animals who cannot say what they know or feel this is a fresh look at the world of dogs from the dog s point of view the book introduces the reader to the science of the dog their perceptual and cognitive abilities and uses that introduction to draw a picture of what it might be like to be a dog it answers questions no other dog book can such as what is a dog s sense of time does she miss me want friends know when she s been bad horowitz s journey and the insights she uncovered from studying her own dog pumpnickel allowed her to understand her dog better and appreciate her more through that understanding the reader will be able to do the same with their own dog this is not another dog training book instead inside of a dog will allow dog owners to look at their pets behaviour in a different and revealing light enabling them to understand their dogs and enjoy their relationship even more

Inside of a Dog 2010-02-18 dogs canis familiaris share the lives of humans all over the world that dogs and the behavior of dogs are of interest to many is therefore no surprise in this thesis the main aim has been to identify factors that affect dogs behaviours the dog canis familiaris is our first domesticated animal since domestication various types of dogs have developed through adaptation to an environment shared with humans and through our selective breeding resulting in a unique variation in morphology and behaviour although there is an individual variation in the behaviour of dogs there is also a difference between breeds moreover selection during the last decades has split some breeds into divergent types labrador and golden retrievers are divided into a common type for show and companionship and a field type for hunting by comparing the breed types we can study the effects of recent selection in paper i we investigate differences in general behavioural traits between labrador and golden retriever and between common and field type within the two breeds by using results from the standardized behaviour test dog mentality assessment there were differences between breeds and types for all behavioural traits however there was also an interaction between breed and type thus a common field type labrador does not behave like a common field type golden retriever even though they have been selected for similar traits the selection has affected the general behavioural traits differently in the two breeds in paper ii we were interested in dogs human directed social skills dogs have a high social competence when it comes to humans two experiments commonly used to study these skills are the problem solving test where dogs human directed behaviours when faced with a problem are measured and the pointing test where dogs are tested on how well they understand human gestures we compared the social skills of german shepherds and labrador retrievers and of common and field type labradors labradors were more successful in the pointing test and german shepherds stayed closer to their owners during the problem solving among labrador types the field type had more human eye contact than the common type importantly when comparing the two experiments we found no positive correlations between the problem solving test and the pointing test suggesting that the two tests measure different aspects of human directed social behaviour in dogs a previous study has identified two suggestive genetic regions for human directed social behaviours during the problem solving test in beagles in paper iii we show that these snps are also associated to social behaviours in labrador and golden retrievers moreover the labrador breed types differed significantly in allele frequencies this indicates that the two snps have been affected by recent selection and may have a part in the differences in sociability between common and field type the behaviour of dogs cannot simply be explained by genetics there is also an environmental component in paper iv we study which factors that affect long term stress in dogs long term cortisol can be measured by hair samples we found a clear synchronization in hair cortisol concentrations between dogs and their owners neither dogs activity levels nor their behavioural traits affected the cortisol however the personality of the owners did therefore we suggest that dogs mirror the stress level of their owners the mediator between genes and the environment is epigenetics and one epigenetic factor is dna methylation in paper v we compared methylation patterns of wolves and dogs as well as dog breeds between both wolves and dogs and among dogs there were substantial differences in methylated dna regions suggesting that dna methylation is likely to contribute to the vast variation among canines we hypothesize that epigenetic factors have been important during domestication and in breed formation in this thesis i cover several aspects on how dogs behaviours can be affected and paint an intricate picture on how genetics epigenetics and human dog relations forms dog behaviour

Dog behaviour 2019-04-17 you may have read books or seen tv shows that tell you that your dog will seek to dominate you your family members and other pets
2014-09-29

unless you become the alpha and put him in his place the theory is that since dogs evolved from wolves and wolves supposedly form packs with strict pecking orders and battle each other to become the pack leader your dog will do the same within your household in this new us edition author barry eaton separates out the facts from the fiction regarding dominance in pet dogs presenting the reader with the results of recent research into the behavior of wolves and the impacts of selective breeding on the behavior of dogs the results may surprise you and will surely inform you

Dominance in Dogs 2011 dogs are dogs and wolves are wolves except when they aren't most scientists now agree that the dog is a subspecies of wolf canis lupus familiaris and while most wolves look and act differently from most dogs it can be very hard to make accurate identifications especially since wolves and dogs can and do interbreed and certain breeds of dogs look and act a lot like wolves having spent years employed at wolf park in indiana authors jessica addams and andrew miller have encountered hundreds of so called wolves that turned out to be dogs hybrids that exhibit the characteristics of both wolves and dogs and even pure wolves that act like dogs between dog and wolf takes a fascinating look at how wolves and dogs are related why they can be so hard to tell apart and what rescue organizations need to know when they encounter a canine of unknown origins you will learn how and why there are so many misconceptions about wolf behavior what evolutionary forces turned good social hunters wolves into animals whose key adaptation was to become good with people dogs which physical and behavioral characteristics displayed by an animal tend to indicate it's a dog vs a wolf usually the state of dna testing and what it can and can't tell you about the genetic make up of dogs and wolves praise for between dog and wolf well written thoroughly researched and grounded in science this book is a must read for all shelter personnel as well as anyone who wants a deeper insight into the often misunderstood animals known as wolfdogs nicole wilde author living with wolfdogs and wolfdogs a z intelligently written good style and based on an enlightened experience this could be the best dog wolf book ever written ray coppinger co author dogs a new understanding of canine origin behavior and evolution animal shelters have to make triage decisions all the time with wolf dog hybrids which are usually deemed defacto too dangerous and euthanized unless they can be quickly placed with a qualified hybrid rescue addams and miller provide a book which provides shelter workers the necessary background on behavior traits and guidelines so that decisions can be based on the behavior of the animals in front of them rather than on a questionable label that merely refers to their supposed ancestry this book gives shelters tools to make humane decisions about animals turned in as wolf dog hybrids pat goodmann m s has worked with wolf park s wolves since 1974 plays a primary role in teaching wolf park s seminars and guides its behavioral research program jessica addams and andrew miller have nearly twenty years of collective work at wolf park a non profit education and research facility in battle ground indiana both started as visitors moved up to long term internships and eventually became full time staff besides working with wolves they have always been involved with animals and the study of animal behavior their degrees are in biology and wildlife science jessica and andrew own and train their own dogs and other pets and read
