there are many text books about engineering design and some include project evaluation techniques there are text books on accounting methods and yet others on business management this book does not aim to replace these specialized texts but brings together the elements of these subjects that young engineers working in industry particularly the construction industry and its customers need to understand most engineers learn about money the hard way by experience in the workplace the authors having done this themselves recognized the gap in engineers education and set out to bridge it this book is based on a 1996 course george solt pioneered for final year engineering undergraduates the book is written in an approachable style and gives young engineers as well as mature engineers an insight into the way engineering businesses run the importance of capital and the problems of cash flow

transition engineering building a sustainable future examines new strategies emerging in response to the mega issues of global climate change decline in world oil supply scarcity of key industrial minerals and local environmental constraints these issues pose challenges for organizations businesses and communities and engineers will need to begin developing ideas and projects to implement the transition of engineered systems this work presents a methodology for shifting away from unsustainable activities teaching the transition engineering approach and methodology is the focus of the text and the concept is presented in a way that engineers can begin applying it in their work

anyone involved with structural design whether a student or a practicing engineer must maintain a functional understanding of wood steel and concrete design principles in covering all of these materials principles of structural design wood steel and concrete fills a gap that exists in the instructional resources it provides a self contained authoritative source that elaborates on the most recent practices together with the code connected fundamentals that other books often take for granted dr ram gupta a professional engineer provides readers with insights garnered over a highly active 40 year international career organized for ready reference the book is divided into four main sections part i covers loads load combinations and specific code requirements for different types of loads it elaborates on the lrfd load resistance factor design philosophy and the unified approach to design part ii covers sawn lumber structural glued laminated timber and structural composite lumber it reviews tension compression and bending members as well as the effects of column and beam stabilities and combined forces part iii considers the steel design of individual tension compression and bending members additionally it provides designs for braced and unbraced frames open web steel joists and joist girders are included here as they form a common type of flooring system for steel frame buildings part iv analyzes the design of reinforced beams and slabs shear and torsion compression and combined compression and flexure in relation to basic concrete structures this textbook presents the lrfd approach for designing structural elements according to the latest codes written for architecture and construction management majors it is equally suitable for civil and structural engineers

this ground breaking reference provides an overview of key concepts in dimensional analysis and then pushes well beyond traditional applications in fluid mechanics to demonstrate how powerful this tool can be in solving complex problems across many diverse fields of particular interest is the book s coverage of dimensional analysis and self similarity methods in nuclear and energy engineering numerous practical examples of dimensional problems are presented throughout allowing readers to link the book s theoretical explanations and step by step mathematical solutions to practical implementations

Power Plant Engineering 1945

the only comprehensive and authoritative reference guide to the asme bioprocessing piping and equipment bpe standard this is a companion guide to the asme bioprocessing piping and equipment bpe standard and explains what lies behind many of the requirements and recommendations within that industry standard following an introductory narrative to the standard s early history industry related

codes and standards are explained the design and engineering aspects cover construction materials both metallic and nonmetallic then components fabrication assembly and installation of piping systems are explored examination inspection and testing then precede the asme bpe certification process concluding with a discussion on system design the author draws on many years experience and insights from first hand involvement in the field of industrial piping design engineering construction and management which includes the bioprocessing industry the reader will learn why dimensions and tolerances process instrumentation and material selection play such an integral part in the manufacture of components and instrumentation this easy to understand and navigate guide will assist engineers design piping chemical etc who need to understand the basis for much of the standard s content as do the contractors and inspectors who have to meet and validate compliance with the bpe standard

Knowledge Engineering 2002

this open access book examines how the social sciences can be integrated into the praxis of engineering and science presenting unique perspectives on the interplay between engineering and social science motivated by the report by the commission on humanities and social sciences of the american association of arts and sciences which emphasizes the importance of social sciences and humanities in technical fields the essays and papers collected in this book were presented at the nsf funded workshop engineering a better future interplay between engineering social sciences and innovation which brought together a singular collection of people topics and disciplines the book is split into three parts a meeting at the middle challenges to educating at the boundaries covers experiments in combining engineering education and the social sciences b engineers shaping human affairs investigating the interaction between social sciences and engineering including the cult of innovation politics of engineering engineering design and future of societies and c engineering the engineers investigates thinking about design with papers on the art and science of science and engineering practice
