the two volume set lncs 4051 and lncs 4052 constitutes the refereed proceedings of the 33rd international colloquium on automata languages and programming icalp 2006 held in venice italy july 2006 in all these volumes present more 100 papers and lectures volume ii 4052 presents 2 invited papers and 2 additional conference tracks with 24 papers each focusing on algorithms automata complexity and games as well as on security and cryptography foundation

Automata, Languages and Programming

2006-06-30

in today s world data must be sent around the world cheaply and securely and that requires origin authentication integrity protection and confidentiality the recipient of a message should be able to ascertain who sent the message be sure that the message has not been changed en route and be sure that the data arrives without having been read by anyone else the second editor invented signcryption an area of cryptography that studies systems that simultaneously provide origin authentication integrity protection and confidentiality for data signcryption schemes combine the features of digital signature schemes with those of public key encryption schemes and aim to provide security guarantees in a way that is provably correct and significantly less computationally expensive than the encrypt then sign method most commonly adopted in public key cryptography this is the first comprehensive book on signcryption and brings together leading authors from the field of cryptography in a discussion of the different methods for building efficient and secure signcryption schemes and the ways in which these schemes can be used in practical systems chapters deal with the theory of signcryption methods for constructing practical signcryption schemes and the advantages of using such schemes in practical situations the book will be of benefit to cryptography researchers graduate students and practitioners
