unlike some other reproductions of classic texts 1 we have not used ocr optical character recognition as this leads to bad quality books with introduced typos 2 in books where there are images such as portraits maps sketches etc we have endeavoured to keep the quality of these images so they represent accurately the original artefact although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy

excerpt from a 1904 book of human physiology to set fixed limits to the subject matter of physiology is a very difficult task because properly conceived large portions of the entire group of medical and biological sciences belong to its province a text book designed primarily for medical students can however regard the field as somewhat more restricted for the prospective physician has abundant opportunity to amplify his knowledge of the bodily functions from his other studies hence in this book i have followed the usual custom and have brought together only so much of our information respecting the human body as can be described as pertaining to its normal functions the discoveries made in the realms of practical medicine of experimental pathology and of pharmacology which in many respects are so full of significance for the processes of the body are therefore for the most part passed by in like manner the facts of comparative physiology have been alluded to only in exceptional cases since an exhaustive discussion of them would have increased the size of the book to a not inconsiderable extent for the same reason i have been unable to find a place for the short histological discussion customary in text books i do not regard this as an error for a necessarily brief and superficial resume of the most important histological facts could be of no great service since the student needs a more extensive knowledge of the finer structure of the body and must in any case obtain this from the text books devoted especially to that subject i do not therefore at all mistake the great importance of histology for physiology on the contrary i would recommend that in the study of a text book of this science a text book of histology and one of anatomy be always at hand in order to combine the physiological facts with the histological and anatomical facts physiological chemistry also has developed so far that more and more it can claim the right to be regarded as an independent science on the other hand it is not possible to present the physiological facts without reference to the chemical processes of the body about the publisher forgotten books publishes hundreds of thousands of rare and classic
