A First Course in Network Science

2020-01-30

a practical introduction to network science for students across business cognitive science neuroscience sociology biology engineering and other disciplines

A Course in Miracles

2008-05

the only edition that contains in one place all of the writings that dr helen schucman its scribe authorized to be printed p 4 of cover

A Course in Advanced Calculus

2012-09-11

this remarkable undergraduate level text offers a study in calculus that simultaneously unifies the concepts of integration in euclidean space while at the same time giving students an overview of other areas intimately related to mathematical analysis the author achieves this ambitious undertaking by shifting easily from one related subject to another thus discussions of topology linear algebra and inequalities yield to examinations of innerproduct spaces fourier series and the secret of pythagoras beginning with a look at sets and structures the text advances to such topics as limit and continuity in en measure and integration differentiable mappings sequences and series applications of improper integrals and more carefully chosen problems appear at the end of each chapter and this new edition features an additional appendix of tips and solutions for selected problems

likelihood ratio tests and permutation tests finally the powerful self consistency principle is used to
introduce principal components as a method of approximation rounded off by a chapter on finite mixture
analysis

A Course in Spirituality

2013-03-09

a course in large sample theory is presented in four parts the first treats basic probabilistic notions
the second features the basic statistical tools for expanding the theory the third contains special
topics as applications of the general theory and the fourth covers more standard statistical topics
nearly all topics are covered in their multivariate setting the book is intended as a first year
graduate course in large sample theory for statisticians it has been used by graduate students in
statistics biostatistics mathematics and related fields throughout the book there are many examples and
exercises with solutions it is an ideal text for self study

A First Course in Multivariate Statistics

1963

a first course in machine learning covers the core mathematical and statistical techniques needed to
understand some of the most popular machine learning algorithms the algorithms presented span the main
problem areas within machine learning classification clustering and projection the text gives detailed
descriptions and derivations for a small number of algorithms rather than cover many algorithms in less
detail referenced throughout the text and available on a supporting website bit ly firstcourseml an
extensive collection of matlab octave scripts enables students to recreate plots that appear in the book
and investigate changing model specifications and parameter values by experimenting with the various
algorithms and concepts students see how an abstract set of equations can be used to solve real problems
requiring minimal mathematical prerequisites the classroom tested material in this text offers a concise
accessible introduction to machine learning it provides students with the knowledge and confidence to
explore the machine learning literature and research specific methods in exam preparation course in a for

An Introductory Chemistry Course in the Icelandic Menntaskoli

2017-09-06

the study of network theory is a highly interdisciplinary field which has emerged as a major topic of interest in various disciplines ranging from physics and mathematics to biology and sociology this book promotes the diverse nature of the study of complex networks by balancing the needs of students from very different backgrounds it references the most commonly used concepts in network theory provides examples of their applications in solving practical problems and clear indications on how to analyse their results in the first part of the book students and researchers will discover the quantitative and analytical tools necessary to work with complex networks including the most basic concepts in network and graph theory linear and matrix algebra as well as the physical concepts most frequently used for studying networks they will also find instruction on some key skills such as how to proof analytic results and how to manipulate empirical network data the bulk of the text is focused on instructing readers on the most useful tools for modern practitioners of network theory these include degree distributions random networks network fragments centrality measures clusters and communities communicability and local and global properties of networks the combination of theory example and method that are presented in this text should ready the student to conduct their own analysis of networks with confidence and allow teachers to select appropriate examples and problems to teach this subject in the classroom

A Course in Large Sample Theory

2015-09-15

this quick simple and user friendly introduction to spss for windows has now been updated so that it can be used with versions 14 to 16 of the software for this edition a section has been added on partial correlation together with new material on sorting classifying and coding data inserting variables and cases and paneling charts and graphs and the chapter on charts and graphs has been completely reworked in line with changes to the spss chart builder the supporting website allows data sets used in the book to be downloaded from the internet and provides additional examples from various social science

~~disciplines the fourth edition retains all of the features that have made the text so attractive to~~
students and teachers the material is concise and focused enabling most users to learn the basics comfortably within 10 hours all the most widely used statistical techniques and graphic facilities in spss for windows are clearly described every statistical procedure is explained with the help of a step by step analysis of a numerical example taken from real data in published research the authors have chosen small data sets so that readers do not waste unnecessary time inputting data screenshots on the page make it easy for students to cross between the text and the screen online support material to accompany the text is available at blackwellpublishing com crashcourse

A First Course in Machine Learning

2015-03-27

in this third volume of a course in analysis two topics indispensable for every mathematician are treated measure and integration theory and complex function theory in the first part measurable spaces and measure spaces are introduced and caratheodory s extension theorem is proved this is followed by the construction of the integral with respect to a measure in particular with respect to the lebesgue measure in the euclidean space the radon nikodym theorem and the transformation theorem are discussed and much care is taken to handle convergence theorems with applications as well as lp spaces integration on product spaces and fubini s theorem is a further topic as is the discussion of the relation between the lebesgue integral and the riemann integral in addition to these standard topics we deal with the hausdorff measure convolutions of functions and measures including the friedrichs mollifier absolutely continuous functions and functions of bounded variation the fundamental theorem of calculus is revisited and we also look at sard s theorem or the riesz kolmogorov theorem on pre compact sets in lp spaces the text can serve as a companion to lectures but it can also be used for self studying this volume includes more than 275 problems solved completely in detail which should help the student further contents
measure and integration theory first look at σ fields and measures extending pre measures carathéodory s theorem the lebesgue borel measure and hausdorff measures measurable mappings integration with respect to a measure the lebesgue integral the radon nikodym theorem and the transformation theorem almost everywhere statements convergence theorems applications of the convergence theorems and security integration or production applications convolutions of functions and measures differentiation exam preparation course

heather hedden offers straightforward get it done advice bringing everything you need to know to create great site indexes together in one place she covers cutting edge tools and techniques and demonstrates how to create index pages index entries indentations hyperlinks and cross reference links if you have already begun to meet the growing demand for site indexes here s a rich source of expert advice and support if you ve yet to create your first index on the have no fear this reassuring guide makes it seem easy

A Course in Analysis

2003

in aesop s fable a fox comes across grapes that are so high he cannot reach them so he walks away muttering that they must be sour grapes likewise many beginning students find no nourishment in a course in miracles because they cannot grasp its lofty spiritual principles the course presents spiritual principles in a western framework yet includes important eastern influences along with deep psychological insights many seekers have transformed their lives through learning the course and applying its principles nevertheless newcomers won t want to study the three volumes and the 1249 pages of the course unless they know it will be worth spending the time and effort required furthermore the beginner invariably needs practical help in actually comprehending the course after all the course quite literally turns the normal perceptual thinking process upside down by offering surprising and profound answers to the most meaningful questions of life if you are a beginner this overview comes to your aid by letting you know in advance that the spiritual principles can be grasped and are as nourishing as sweet grapes as they weave together to unify and heal the mind this introduction to the course information by providing clarity and conciseness enabling you to make the difficult steps of the course information easier to understand and apply for passing the cism exam the how to pass on your first william maning

the course which teaches how to perform miracles of changing fearful perceptions into loving perceptions
your mind can find peace and wholeness through practicing true forgiveness that reminds you of the
divine presence within others and within yourself this brief introductory overview provides an
inexpensive and efficient way for you to determine for yourself if the path of forgiveness presented by
the course is right for you to pursue in greater depth

A Short Course in Kindness

1911

this book introduces harmonic analysis at an undergraduate level in doing so it covers fourier analysis and paves the way for poisson summation formula another central feature is that it makes the reader aware of the fact that both principal incarnations of fourier theory the fourier series and the fourier transform are special cases of a more general theory arising in the context of locally compact abelian groups the final goal of this book is to introduce the reader to the techniques used in harmonic analysis of noncommutative groups these techniques are explained in the context of matrix groups as a principal example

A Course in Meteorology and Physical Geography

1943

a first course in computational algebraic geometry is designed for young students with some background in algebra who wish to perform their first experiments in computational geometry originating from a course taught at the african institute for mathematical sciences the book gives a compact presentation of the basic theory with particular emphasis on explicit computational examples using the freely available computer algebra system singular readers will quickly gain the confidence to begin performing their own experiments

a course in lens design is an instruction in the design of image forming optical systems it teaches how a satisfactory design can be obtained in a straightforward way theory is limited to a minimum and used to support the practical design work the book introduces geometrical optics optical instruments and aberrations it gives a description of the process of lens design and of the strategies used in this process half of its content is devoted to the design of sixteen types of lenses described in detail from beginning to end this book is different from most other books on lens design because it stresses the importance of the initial phases of the design process paraxial lay out and thin lens pre design the argument for this change of accent is that in these phases much information can be obtained about the properties of the lens to be designed this information can be used in later phases of the design this makes a course in lens design a useful self study book and a suitable basis for an introductory course in lens design the mathematics mainly used is college algebra in a few sections calculus is applied the book could be used by students of engineering and technical physics and by engineers and scientists

Deep Learning for Coders with fastai and PyTorch

2012-12-06

this book is for new managers first time managers or managers who felt that they never really received the training they needed to succeed in their role if you find being a manager challenging stressful and tiring this is the book for you taking on a management role can be exciting exhilarating but also extremely challenging as everyone looks to you for all the answers in the first time manager guide we cover a crash course to help you get through the first 90 days and the first year in your new role learn how to love and excel in a leadership position and set yourself on the right career path to larger and bigger roles from understanding the expectations of you as a manager to developing and succeeding in the role we ll give you the skills systems and frameworks to perform as a first time manager whether you are working with a small team of two to a team of fifty or more this book will give you the foundations to look in the right areas and ask the right questions with over 50 of managers failing in the first year

interviews with those who failed the exam to identify gaps in their knowledge or is it the razor sharp
focus on making sure you don t waste a single minute of your time studying any more than you absolutely
have to actually it s all of the above this book includes new exercises and sample questions never
before in print offering numerous sample questions critical time saving tips plus information available
nowhere else this book will help you pass the togaf 9 foundation part 2 exam on your first try up to
speed with the theory buy this read it and pass the togaf 9 foundation part 2 exam

A First Course in Combinatorial Mathematics

1981

this book applies rasch measurement theory to the fields of education psychology sociology marketing and
health outcomes in order to measure various social constructs the chief focus is on first principles of
both the theory and its applications because software is readily available to carry out analyses of real
data numerous small examples are provided in the book the software used in these examples and which is
helpful in working through the text is rumm2030 rasch unidimensional models for measurement the book s
main goals are to equip researchers with the confidence they need in order to be in control of the
analysis and interpretation of data and to make professional rather than primarily statistical decisions
mechanically because statistical principles are necessarily involved reviews of the requisite statistics
are provided in the appendix the content is based on courses that have been taught both online and in
intensive form for over two decades although first principles are emphasised much of the book is based
on research conducted by the two authors and their colleagues

A Book of Games

2006

queueing theory the mathematical theory of waiting lines in all its configurations continues to be a
standard major area of operations research on the stochastic side therefore universities with an active
program in operations research sometimes will have an entire course devoted to queueing theory and the course is also taught in computer science electrical engineering mathematics and

cism certified information security manager certification exam preparation course in a for passing the cism exam the how to pass on your first william maning
~~industrial engineering programs the basic course in queueing theory is often taught at first year~~
graduate level though can be taught at senior level undergraduate as well this text evolved from the author s preferred syllabus for teaching the course presenting the material in a more logical order than other texts and so being more effective in teaching the basics of queueing theory the first three chapters focus on the needed preliminaries including exposition distributions poisson processes and generating functions renewal theory and markov chains then rather than switching to first come first served memoryless queues here as most texts do haviv discusses the m g 1 model instead of the m m 1 and then covers priority queues later chapters cover the g m 1 model thirteen examples of continuous time markov processes open networks of memoryless queues and closed networks queueing regimes with insensitive parameters and then concludes with two dimensional queueing models which are quasi birth and death processes each chapter ends with exercises
