the computer graphics cg industry is an attractive field for undergraduate students but employers often find that graduates of cg art programmes are not proficient the result is that many positions are left vacant despite large numbers of job applicants this book investigates how student cg artists develop proficiency the subject is important to the rapidly growing number of educators in this sector employers of graduates and students who intend to develop proficiency for the purpose of obtaining employment educators will see why teaching software

oriented knowledge to students does not lead to proficiency but that the development of problem solving and visualisation skills do this book follows a narrow focus as students develop proficiency in a cognitively challenging task known as nurbs modelling this task was chosen due to an observed relationship between students who succeeded in the task and students who successfully obtained employment after graduation in the study this is based on readers will be shown that knowledge based explanations for the development of proficiency do not adequately account for proficiency or expertise in this field where visualisation has been observed to develop suddenly rather than over an extended period of time this is an unusual but not unique observation other studies have shown rapid development of proficiency and expertise in certain professions such as among telegraph operators composers and chess players based on these observations the book argues that threshold concepts play a key role in the development of expertise among cg artists

this book proposes a new critical relationship between computation and architecture developing a history and theory of representation in architecture to understand and unleash potential means to open up creativity in the field historically architecture has led to spatial representation today computation has established new representational paradigms that can be compared to spatial representations such as the revolution of perspective in the renaissance architects now use software robotics and fabrication tools with very little understanding and participation in how these tools influence revolutionize and determine both architecture and its construction today why does the discipline of architecture not have a higher degree of authorship in the conception and development of computational technologies that define spatial representation this book critically explores the relationship between history theory and cultural criticism lorenzo eiroa positions new understandings through parallel historical sections and theories of many revolutionary representational architecture canons displaced by conventional spatial projection he identifies the architects artists mathematicians and philosophers that were able to revolutionize their disciplines through the development of new technologies new systems of representation and new lenses to understand reality this book frames the discussion by addressing new means to understand and expand architecture authorship in relation to the survey information representation higher dimensional space big data and artificial intelligence in the pursuit of activating an architecture of information this will be important reading for upper level students and researchers of architecture and architectural theory especially those with a keen interest in computational design and robotic fabrication

abstract based on black and wiliam s seminal publication in 1998 a number of countries have implemented formative assessment as a means of improving student learning formative assessment was adopted in indonesia more than two decades ago recently the notion has been strengthened in the current curriculum kurikulum 2013 which explicitly emphasises students role in the process of assessment unfortunately the notion of formative assessment as stipulated in the kurikulum 2013 was criticised by teachers who claimed that it is a heavy burden and too complicated to implement these criticisms may derive from a number of factors the most conspicuous of which is that teachers lack information about formative assessment to date there have been only a few studies that focus on formative assessment in english language teaching in indonesia and no studies that specifically investigate how formative assessment can be implemented in the indonesian context this study aims to explore how formative assessment can be carried out and to find examples of good practice which can inspire other teachers to adopt or adapt the practice a multiple case study design was employed to investigate teachers understanding of formative assessment their application of this understanding to their teaching practice and the way they overcome any challenges encountered eight secondary school english teachers participated in this study four teachers from schools under the ministry of education and culture moec and four teachers from schools under the ministry of religious affairs mora the teachers who agreed to participate were selected based on the following criteria they have had training and experience in implementing formative assessment and they were recommended by their peers in the secondary high school teachers association committee data from interviews classroom observations and artefacts were analysed using a framework derived from wiliam and Leahy s 2015 categorisation of formative assessment strategies which included clarifying sharing and understanding learning intentions and successful criteria engineering effective discussions tasks and activities that elicit evidence of learning providing feedback that moves learning forward activating students as learning resources for one another and activating students as owners of their own learning oswalt 2013 thompson wiliam 2008 wiliam leahy 2015 the findings from the study showed that teachers have diffuse understandings in defining formative assessment however they agree on other concepts of formative assessment such as its potential benefits and key elements furthermore they add another element which can only be found in the area of formative assessment in elt the integration of language macro skills this study has shown that teachers understand the notion of formative assessment in two different ways firstly teachers use the results of formative assessment to adjust their teaching in order to enhance learning and secondly they implement formative assessment strategies in line with their teaching and learning context thus developing

their own unique formative assessment culture this study has found that the teachers who participated in this study were able to provide excellent examples of how formative assessment can be carried out with the aid of instruments such as three lines writing public speaking video conferencing and so on in addition this study has identified that teachers were able to make room for formative assessment despite the testing culture that is entrenched in the Indonesian education system nevertheless some of the teachers practices needed to be refined in order to gain the potential benefits of formative assessment this study also found that teachers were able to overcome challenges that they encountered during the implementation of formative assessment such as large class sizes and limited time by integrating educational technology and modifying teaching methods therefore the results of this study suggest that formative assessment can permeate teaching practice and that teachers in Indonesia have the potential to reap its benefits
